

Digital Moisture Meter

The quality of all agriculture products like grains, pulses, oil seeds, vegetable seeds, etc. is influenced by their moisture contents. Various conventional methods of moisture measurements like Oven-dry method , Distillation method, Drying with desiccants etc. are tedious , long time consuming methods.

Fast as well as Field Usable , Portable Digital Moisture Meter is a necessity for fast and accurate moisture measurements to meet the requirements of the Farmers , Grain Storage Personnel and the Agriculture Products Marketing Institutions

AGRO works on the principle of dielectric constant variations due to change in moisture content of the agro – product

AGRO measures ‘ ‘ % MOISTURE ’ ’ of the agro-product or a sample in a non-destructive way within about 30 seconds. The meter is provided with inbuilt automatic temperature compensation for the reading being displayed. The latest Integrated Circuits based efficient AGRO provides long battery life. The Digital Moisture Meter - AGRO does not contain any moving parts hence gives long maintenance - free operating pleasure to the users
